Istanbul Headquarters

Ermop Production Plants

Ermop's success story dates back to 1990.

It has been established as a family company based in Istanbul. Ermop, which has more than 30 years of experience in the industrial cleaning sector, is Türkiye's oldest mop manufacturer and the leader in professional cleaning, as well as producing quality and system-oriented cleaning equipment. Professional cleaning equipment and systems it produces; It is located in every moment of life, especially hospital, school, hotel, shopping mall. At the same time, Ermop has undertaken the cleaning equipment supplier of many national and international world brands in the professional cleaning sector.

Ermop exports its products to more than 20 countries around the world. In addition to its dealers in Europe and Asia, also has active warehouses and sales offices in Germany, England and Russia.

Carrying its technological breakthroughs in accordance with the requirements of the era in the cleaning industry, Ermop is on the way to grow the export market day by day and become a world brand by keeping customer satisfaction in the foreground with its reasonable price policy, after-sales support service, quality product production and service improvement strategy. continues to take firm steps forward.

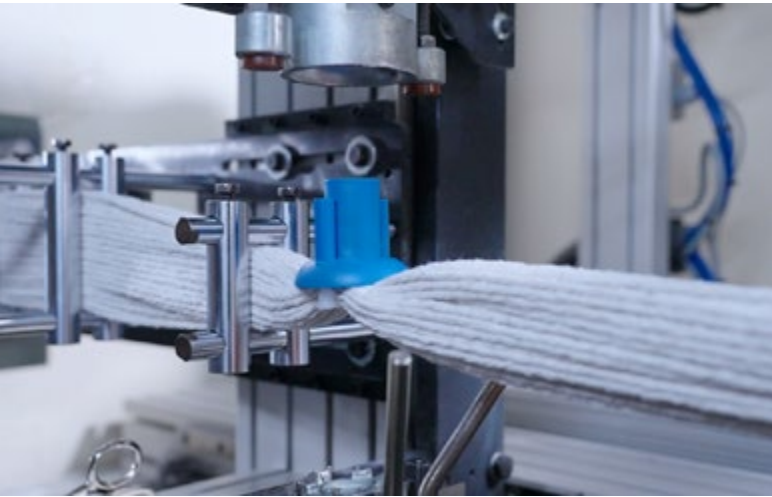

Production

Ermop Production Plants in Düzce, Türkiye is established on a land of 21.000 sqm and has an indoor area of 10.000 sqm.

In addition to its 30 years of experience in the industrial cleaning sector, it has improved its production volume every year thanks to its modern and technological winding, weaving and automation cutting machines, and has an annual mop production capacity of 5 million pieces with this advanced infrastructure and production system.

Ermop factory is one of the few and modern mop production facilities in Europe.

The factory brings production to an upper level with the most modern injection systems, mould and mop weaving machines, digital stock tracking and investments in logistics. Ermop has, at the same time, reached a production capacity that can easily respond to the increasing customer demands at home and abroad, thanks to its nearly 100 employees, more than 250 moulds and injection machines, as well as its strong logistics infrastructure.

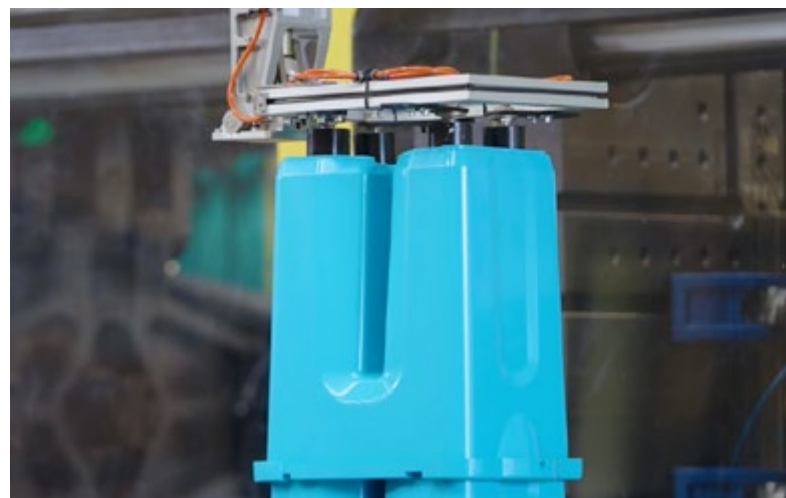

It continues to work with the principle of designing and producing products that best meet the expectations of customers and the needs of the sector.

Ermop has always carried out the production of high quality and durable cleaning tools required by the organizations it serves, in line with the principle of “persistent customer satisfaction”. It has produced comprehensive systems and developed its product range by constantly renewing itself both on production basis and in the field of production technology.

Ermop formalize its investments with a focus on quality and environmental production, society and sustainable consumption in order to become a high quality brand and above global standards in production. The products produced in Ermop’s facilities in Düzce have been certified at the highest level of quality and standards with many national and international inspections and certificates.

A global customer network extending from Istanbul to three continents.

Cleaning equipment and systems may differ in each country. Ermop follows the expectations of its customers and the trends of the market closely. Thus, it produces products and develops systems that meet the expectations of customers in the best way at national and international abroad.

TOGETHER WITH ERMOP

Discover how you can increase your potential energy and water savings by using the right cleaning equipment and system for your business!

Cleaning products and professional cleaning systems produced by Ermop are preferred and used by various sectors all over the world.

OUR PRINCIPLES

- To keep customer satisfaction at the highest level by working always with a customer focus.
- Not compromising the required durability and quality in all products offered to the customer.
- To ensure the right quality-price ratio and to meet consumer expectations at the highest level with its wide product range.
- To follow and improve the products, services and processes we offer in cooperation with our suppliers.

PROFESS

SYSTEMS

IONAL **ermop**[®]

Ermop manufactures and develops cleaning equipment for use in all areas of life. With its system-oriented products in professional cleaning, it allows you to save water, energy and time in cleaning hospitals, hotels, shopping malls, schools and facilities.

Gecko System

1 PREPARATION OF MOPS

A- Washing

Chemicals: Washing is done at 60 or 90 degrees Celsius with Quantum Basic, Quantum Surf and Quantum Peracetic.

B- Chemicalization

Optionally, the chemicalization process of the mops may be carried out in the machine with the product of Bacteria or Sanilac. Chemicals are dosed automatically to the machine with the dosing unit.

C- Humidity

The humidity of the mops is adjusted according to the mop and surface used.

2 STORAGE OF MOPS

Ready-to-use mops are stored in sealed Gecko hygiene boxes. *(Can be stored up to 24 hours.)

3 APPLICATION

The mops inside the hygiene boxes placed on the Floor Trolleys are ready for direct application. The system is suitable for all floors. Approximately 35-40 m² area is cleaned with a mop. After a cleaning work, the mop is thrown into the dirty part of the floor trolley, the accumulated mops shall be sent to the washing machine

4 CONCLUSION

- Water is saved *
- A real hygienic environment is created and its continuity is ensured.
- Chemical cost is reduced with automatic dosing.
- Cleaning Staff uses their workforce more effectively.
- Occupational health is protected, possible accidents are prevented.
- Currently used equipment stock is reduced.

Gecko System is a cleaning system developed by Ermop for professional users looking for innovative solutions. With the professional mop washing machine and specially designed mop and apparatus products in the system, **it helps you save time and labour thanks to its convenient and fast use.**

SAVING ON WATER

With the **Gecko System Mop washing machine**, it cleans an area of 1,600 square meters using 50 litres of water.

50 l water = 1.600 sqm

Gecko Mobile Series

GECKO MOBILE 1

It is a practical mini floor trolley used integrated with the Gecko System. It is easy to use and practical for damp mopping applications. The mop storage boxes and accessory holders on the front allow cleaning tools to be kept together.

Inspired by Nature

Gecko mop and its apparatus have been developed, inspired by the sticky and dynamic properties of the gecko lizard's paw in nature. Thanks to its design, the apparatus adheres to the mop more strongly, ensuring high performance in floor cleaning.

GECKO MOP HYGIENE BOX WITH LID

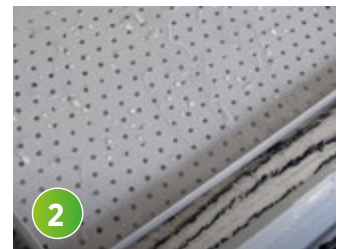

It keeps the humidity of the mops that come out of the washing machine with chemicals and damp for 24 hours thanks to its leak-proof cover and keeps it ready for use at all times, as well as providing convenience to the user with its ergonomic handle. These colourful boxes with lid, which can be stacked on the cleaning trolleys and taken to the cleaning area easily, are ideal for Gecko and Wings systems.

i 20 Gecko mops can be carried in one box

GECKO DOSING STRAINER

CODE	WD. (cm)	HT. (cm)	GR	PCS. IN BOX
GCK D SZ	47	33	484	15

USAGE AND FEATURES

With the Ermop Gecko strainer dosing system, the mops are moistened evenly thanks to the special strainer apparatus in order to achieve effective cleaning in the enterprises, and in this way, maximum performance is obtained from each mop. After cleaning an area of 35-40 sqm with each mop, the mops are put into the dirty bag in the floor trolley and taken to the wash. Thus, the risk of cross-contamination, which is also a necessity of today's Covid-19 struggle, is almost completely eliminated and a more hygienic environment is

Wings System

WINGS SYSTEM developed by Ermop, has been developed to add difference to professional cleaning with its functional lock system, folding apparatus, mop and specially designed dosing box.

“The Wings system prevents cross contamination in the healthcare industry and is effective in critical area cleaning.”

SOLUTION DOSING BOX

Thanks to the dosing box with check valve (check-valve) system with 9 l chemical water capacity, water and chemical usage are saved. One side of the double-sided mop is moistened in a specially designed dosage box.

After removing and cleaning the dirt with the damp side of the mop, rinsing and wiping is done with the dry side of the mop.

Hands-free closing and opening mechanism

Double-sided mop feature for dry and wet

8.5-9 l water consumption per 700 sqm cleaning

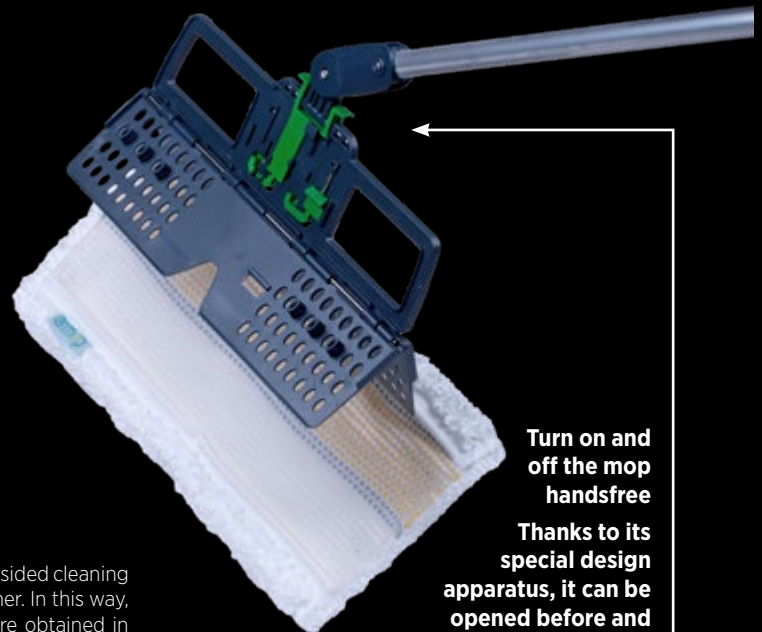

Scan the QR code to watch the video on how to use.

HYGIENIC AND PRACTICAL

40 cm Wingsmop is used for cleaning an area of 30-35 sqm. With its double-sided cleaning concept, the mop moistens the floor with one side and rinses it with the other. In this way, hygienic results that can be achieved with a single mop and two mops are obtained in areas where human circulation is intense.

This double-sided mop, with high moisture and dirt holding capacity, ensures optimum dirt absorption and better gliding on the floor as well as its loop and fibre structure. This guarantees thorough professional cleaning. At the same time, since two mop operations can be performed with a single mop, washing costs are also saved.

Turn on and off the mop handsfree

Thanks to its special design apparatus, it can be opened before and after cleaning the mop handsfree and apparatus, then the mop is placed and closed.

WINGS MOBILE 1

It is a practical mini floor trolley integrated with Wings System. Wings is easy to use and practical for double-sided mopping applications. The mop dosage box and accessory holders on the front keep the cleaning tools together. The slippery floor plate can be attached and used together. Thanks to its ergonomic design, it ensures practical and effective use.

Caiman System

The most important feature of the Caiman Moist Mop, which is specially produced for the Caiman Apparatus, which is an Ermop design, is that it has a mono flap. Thanks to this feature, the mop that completely enters the press can be easily cleaned from excess water by squeezing it. Thus, it allows both wet and damp cleaning to be done at the same time, and ensures saving labour and time.

Designed by Ermop, the most important feature of the Caiman moist mop produced for the Caiman apparatus is that it has a single flap. The fact that the apparatus has a single flap allows it to be fully inserted into the press and tightened. Doing both wet and damp cleaning at the same time saves labour and time.

MAGNETIC APPARATUS

Caiman magnetic apparatus has the feature of being thinner and lighter than its counterparts. Thanks to its different design, it ensures comfortable and ergonomic use. With its additional design, the Caiman apparatus offers the possibility of rinsing and squeezing 40 and 50 cm mops in press bins without touching.

CAIMAN MOP

It is a mono-flap damp mop produced for Ermop's special design Caiman Apparatus. Its single flap shape allows it to be fully inserted into the press and squeezed. Cleaning both wet and damp at the same time saves time.

Stepmop System

Escalators Are Now Cleaner!

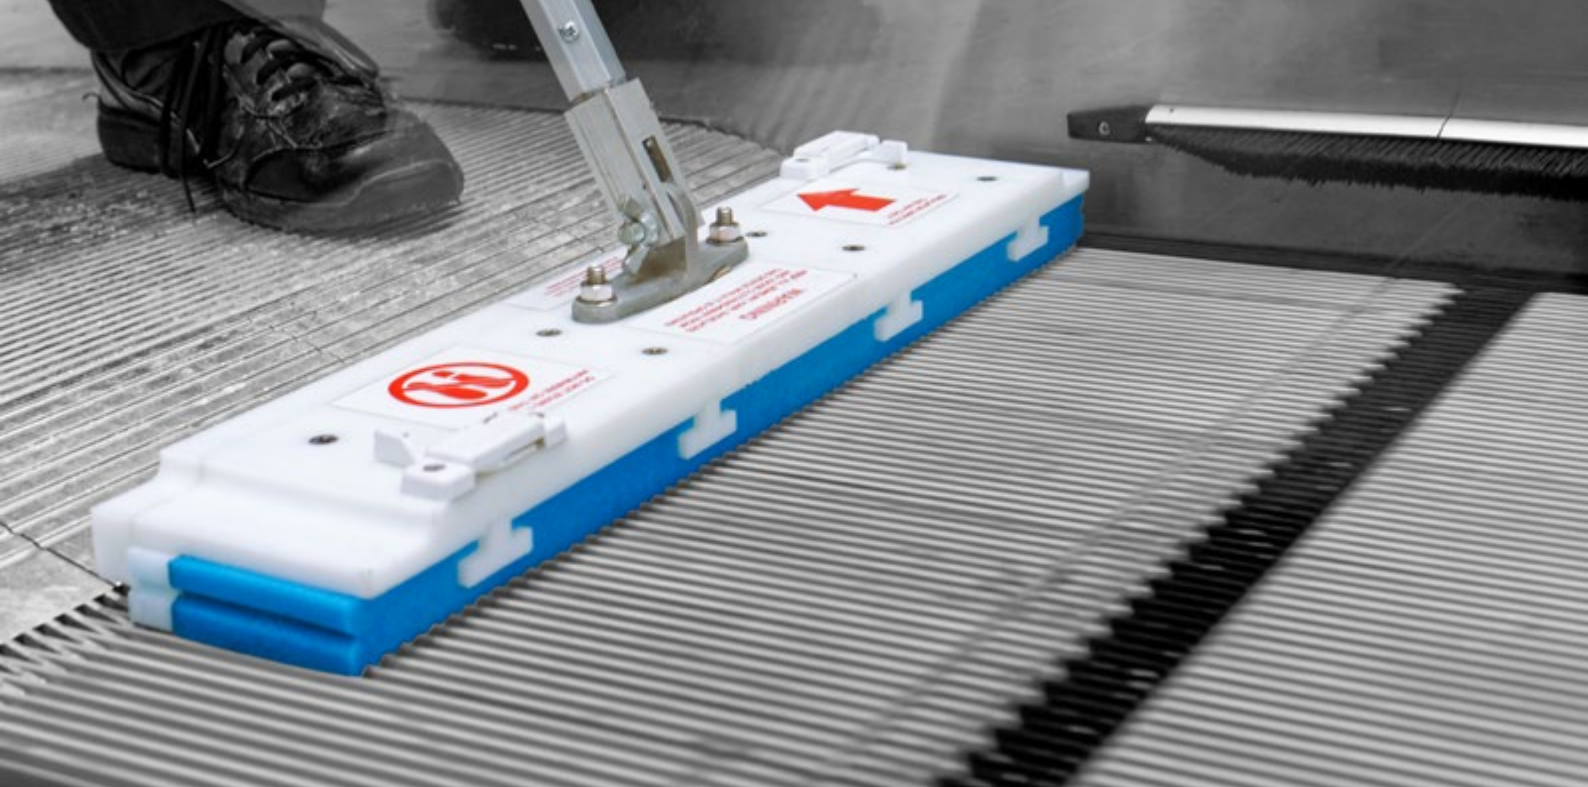

STEP MOP system ensures fast and effective cleaning in 5 minutes without the need to stop the escalator. It is a low-cost, single-person system that is ideal for daily and weekly use.

Why should escalators be cleaned?

Why should escalators be cleaned?

Escalators are the most expensive flooring in any building. Escalators can also cause serious problems such as slipping and falling, often when not properly and consistently cleaned or maintained.

mop

GROUP

Our Ermop mop types; It is divided into 4 main groups as Moist, Microfiber, Wet and Orlon. First quality yarn is used in all our mop types. Thus the life of the mop and its water holding performance has been enhanced. Transfer printing system, chip mop tracking system are used in production.

COLOUR CODE

Thanks to the colour code given to the mop, cross contamination is prevented and hygienic environments have been created. While washing, mixing of the mops is prevented and hygienic washing results are obtained. It also eliminates storage problems by reducing colour code stock costs. Extra colour code application is available according to customer demand.

handle

G R O U P

The use of high quality handles is important in professional cleaning. Since the Ermop handle group is made of corrosion-resistant material, it is resistant to all kinds of storage and usage conditions. The mop handles made of anodized (electrochemically coated) aluminium are durable and long-lasting. Aluminium can be used safely for many years due to its non-oxidation feature. The ends of the mop handles with a diameter of 23.5 mm have the options of perforated or screwed.

ERMOP ALUMINIUM HANDLE

It is our aluminium handle type compatible with all Ermop mop apparatus.

Control measures for indoor cleaning may help to reduce slips and falls:

- Use **moisture-absorbing mops with bevelled edges** in entry areas.
- Place “**Wet Floor**” signs on areas after cleaning when necessary.
- Mark areas or use warning signs to prevent people from stepping on problem floors.
- Immediately clean up spills of liquid and sticky substances with a wet and dry mop.

TAKE PRECAUTIONS!

Every year, millions of people can be seriously injured by slipping and slipping on wet ground due to improper use of warning skittles and signs.

Press button

500ml solution liquid reservoir

press buckets

The professional mop bin trolley is a wheeled buckets for cleaning that allows the user to wring a wet mop without getting hands dirty. It is divided into two groups as double compartment and single compartment. It is preferred in general cleaning areas. Plastic press cleaning trolleys are a more economical alternative to their metal counterparts. Their lighter construction makes it less burdensome for workers to push a mop bin around your workplace.

HIGH RISK

Use these colour bins for places with a higher risk of contamination and bacteria. This includes toilets and urinals.

LOW RISK

Low-risk areas include the rest of the bathroom, such as the sink and under the mirror, or private areas such as laboratories and gyms.

MULTI-PURPOSE CLEANING

Use this bin colour for general cleaning, including office floors, hallways and daily work areas.

RESTAURANT & CAFE

This bin colour is used in restaurant, cafe, kitchen and food service areas including behind the bar.

SINGLE PRESS BUCKET (20 Lt -25 Lt)

Designed for narrow spaces with its fast and practical use, the single-compartment press bin is suitable for use with wet mops and all mop types with ears.

SUSTAINABILITY

For Ermop, people, their working areas, nature and environment are at the centre of everything. For this reason, it constantly develops its product range in this direction in order to make it more environmentally friendly and sustainable. Ermop Eco series products, one of this product category, are produced from recycled plastic and yarn materials with the principle of sustainability. Thus, in addition to the use of the right product in professional cleaning, environmental friendly product consumption is also encouraged.

Ermop is a company that contributes to the country's economy, is aware of social problems, is sensitive and respectful to the environment, uses natural resources in the best way and values its employees, as well as with an environmentalist production and consumption principle that ensures that the companies it cooperates with attach importance to these issues. is on its way.

our goal is an environmentally friendly production and to leave a liveable clean world for future generations.

The logo for Ermop, featuring the brand name in a stylized, lowercase, white font with a registered trademark symbol. The background is a vibrant green with white line art of a mop head and handle, and a partial view of a person in a blue uniform on the right side.

R-Bin

R-BIN recyclable solid waste bin, with a capacity of 60 litres, produced by Ermop, facilitates the collection of paper, plastic, glass and metal packaging waste with its innovative features. In addition, it saves costs, time and labour for the collection of wastes to be recycled. The evacuation channels in the R-BIN reduce the amount of force used to move the garbage bag by up to 60%. In addition to providing more hygienic space with its specially developed lids for the user, the ergonomic design of the user-friendly upper and lower handles makes it easy to use.

R-BIN: RECYCLE BINS

R-BIN RECYCLE BIN

Thanks to its special lid design, R-Bins, which creates hygienic environments, facilitates waste separation with colour coding. It provides an advantage for stylish and long-term use in places. Thanks to its design, it can be used in narrow spaces.

Specially designed Cascade Drum and special mop programs with cold water rinse help remove chemicals and dirt. It gives hygienic results with WFK Institute approved disinfectant washing.

With the dosing pump system

that can be connected up to 8 units, completely ready-to-use mops come out of the machine. This helps you save labour, time, chemicals and water.

Developed for new mop washing records with a hygiene guarantee.

Models of Proline series, which are the last generation of industrial mop washing machines, have been adapted to the specific needs of the sector. Sustainable performance in professional cleaning is guaranteed thanks to the multilingual operating panel and profiClean programs.

MOP WASHING CHEMICALS

Quantum Basic Mop Washing (6,6kg)

Super concentrated non-foaming detergent to remove strong alkaline, oil and dirt stains.

Quantum Surf Mop Washing (5,4kg)

Complex organic super concentrate detergent for white and colored fabrics. It removes tough stains with its formula enhanced with enzymes and surfactant.

Quantum Peracetic Mop Washing (5,3kg)

Peracetic acid, acetic acid and hydrogen peroxide based liquid bleach. Stain removal and hygiene holding feature at low temperatures (40° -60°).

Bakterio Disinfectant

Disinfectant cleaner approved by Italian Ministry of Health in medical and surgical fields. Quickly destroys bacteria on the surface.

-Sanialc: Alcohol-based general surface detergent with perfume, quickly dry on all surfaces and does not need to rinse.

Sanialc

Alkol bazlı genel yüzey deterjanı, tüm yüzeylerde çabuk kurur ve durulamaya gerek kalmaz.

Features

- Excellent performance from the first use, serving to reduce washing costs.
- Real-time control of detergent consumption, energy, water and related costs.
- It reduces product wastage by creating special washing regimes.
- Thanks to a careful balance of surfactant systems and biological components, guaranteed washing performance even at low temperatures.

Quantum series products for industrial laundries perfectly respond to the need to guarantee excellent washing performance, guarantee delicate operating costs and reduce environmental impact. Sanitec's expert technical staff can offer special solutions according to the type of fabric, the condition of the machine and the chemical-physical profile of the washing water.

ACCESSORIES

Industrial accessory sets developed in accordance with special cleaning needs, offer quality work with professional cleaning machines and systems thanks to Ermop's ergonomic, durable and flexible designs.

Machine Bottom Plinth

Specially developed bottom plinth for mop washing machines. It is designed to improve the aesthetic appearance of the laundry room and provide a comfortable and ergonomic working height. The plinth has adjustable feet, so its height can be easily changed.
